

## The eSols Approach To Automate People Process.

**TaskPro's** unique process provides an enhanced user experience that harnesses technology to serve people and procedures rather than constraining people and procedures to fit technology. Automating, executing and managing business procedures requires a process-centric, rather than application-centric approach. This approach must make procedures amenable to human interaction, change, and monitoring across organizational and system boundaries.

### **TaskPro uniquely:**

- ***Supports the way people work and procedures naturally occur.*** **TaskPro** recognizes that effective procedures are built around people and the unique instances of tasks. Tasks do not arise from any one function or department but spans over multiple departments, organizations and People. The people responsible for tasks must be empowered to control the function and flow of those tasks.
- ***Supports the dynamic, distributed nature of procedures.*** In the business ecosystem, procedures are dispersed, dynamic, long running, and inherently rely on a diverse mix of predictable and unpredictable tasks. **TaskPro** removes the limitations imposed by pre-determined, structured procedures and provides the flexibility to support exceptions, ever-changing procedural requirements and the expansion of functionality across the enterprise. By treating each instance of a task as unique — with its own set of information, requirements, and participants — **TaskPro** supports diverse and dynamic nature of procedures within today 's extended enterprises.
- ***Acknowledges existing enterprise business procedures and provides a means to extend and enhance their functionality.*** **TaskPro** extends the benefit beyond stable, high-volume tasks into more dynamic, high-value collaborative procedures. Unlike Project Management solutions that constrain diversity with generic procedural descriptions, **TaskPro** helps companies embrace and manage diversity.
- ***Provides improved visibility and under-standing of procedures.*** By supporting task tracking, auditing, and profiling, **TaskPro** enables continuous procedure innovation and optimization. **TaskPro** allows businesses to distribute information and tasks without sacrificing their ability to carefully manage essential business activities. Powerful journalizing functionality tracks the current status of any tasks, including where the task traveled, who interacted with the task, what systems were involved, and what changes were made. This information can be extracted for in-depth procedure analysis.

**Leverages contemporary technology framework.** **TaskPro** successfully addresses the vast complexity of enterprise technology infrastructure and networks. With contemporary technology, **TaskPro** provides unprecedented flexibility, reliability, and scalability.

**TaskPro** Timesheets tracks effort, progress, costs and other information for you across large numbers of people working on many different tasks and projects.

### **We support all your staff**

- individual staff easily record what you need
- resource and line managers get control and information
- project managers see progress and details
- accounts get accurate, fast billing for clients
- management quickly see the big picture

### **Use TaskPro Timesheets because**

- simple to use
- simple to implement
- simple to extend and customize
- simple to generate vital reports

### **It's powerful**

- web-based or conventional
- handles a few tens to thousands of users
- collects a central, open database
- optionally, industry's best links to Any project management tool

### **Producing Reports**

As each week's timesheets are processed, the database records hours spent and other data. This builds into a complete history of the work done by each person for each project and non-project task, providing a valuable source of information for management analysis and reports.

You can print any view from the database and the reports provided in **TaskPro** Timesheets — such as the "Timesheets Sent but not Received" report, which you viewed on screen.
